FTI Consulting's Digital Delivery Practice

Overcoming the Data Challenge

Typical challenges we hear from our clients:

- Monetising data through digital initiatives, data science and data driven operations are all hindered by challenges below:
- Regulatory risks due to poor data competencies
- Spiralling cost of ownership

Causes

Our Clients Have Experienced Major Benefits from Our Services

Data Services Core Competencies

Our clients consistently benefit from the delivery of the the sub-components of our data services:

BI & Analytics – A strategic approach to provide the platforms for the production of insight, the automation of visual analytics and to unlock data science capability. This includes technology design and target state information delivery mechanisms.

Security – A set of recommendations for securing data and environments, and an approach for how users interact with both.

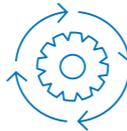

Data Quality Framework – A clear framework for monitoring, reporting and alerting data quality issues including technology design and correction/improvement programmes.

Host Architecture Design – A clear design for data hosting, estimating non-functional requirements (NFRs), physical infrastructure or leveraging cloud technologies.

Governance Model – A clear model for ownership, responsibilities and controls for data as a whole, including enterprise level data policy development.

Operating Model – A comprehensive model for how data is managed and used across an organisation including organisational structure, data services definition, processes, procedures and communications.

Master Data Management – A defined approach for mastering key business entities' data (e.g. single view of customer, supplier) including technology design and design for synchronising systems.

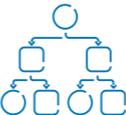

Roadmap & Investment Strategy – A medium to long term delivery roadmap which is tailored towards strategic business outcomes, investment stage gates and return on investment.

Compliance – A clear approach for meeting regulatory obligations, which align the reference architecture and technical enablement e.g. GDPR, Solvency, IFRS etc.

Implementation Services – A range of expert delivery people including Developers, Data Scientists, Data Modellers, Programme Managers and Architectural Practitioners.

Data Reference Architecture - A logical blueprint for how data is structured and integrated across an entire organisation.

Services Centre – A private cloud which is available to our clients to host data solutions. This includes a dedicated services team comprised of specialist Data Engineers and Analysts to build and manage these solutions.

OUR SUCCESS STORIES

DATA STRATEGY & TRANSFORMATION

Our client, a major European insurer, was suffering from a general lack of direction with respect to their data and was paying the price for neglecting to invest over many years. Key data consumers such as the Pricing and Actuarial teams were severely hampered in terms of data preparation, speed to insight and pricing accuracy. The client's marketing strategy was also failing to deliver growth. As a whole, MI was difficult to generate, insight was scarce and data services and ownership as a whole were ill-defined. The client approached FTI Consulting to utilise on our **Data Strategy service**.

We worked with the client's c-suite business leaders to develop a strategic roadmap for data and a business case. This included a target state data reference architecture, a single view of customer design, technology design, infrastructure design, organisational structure and an operating model for data. We delivered a three-year implementation plan, investment and return on investment strategy. The client subsequently leveraged our **Implementation service** to carry out the technical delivery, operating model transformation and programme management.

The business case demonstrated a €1.7m implementation spend with €3m+ return on investment in the first three years alone through FTE savings, faster insight and faster pricing. The client continues to excel using a more simplified, integrated and performant data landscape.

INSURANCE CLAIMS ANALYTICS

Our client, a large international insurer was experiencing accelerating motor claim costs. We conducted an initial analysis that shortlisted business hypotheses in order to concentrate on a manageable boundary of data analysis. We identified bodily injury as a primary cause of spiraling costs (e.g. whiplash). More specifically, third party bodily injury claims which were notified late in the claims handling process raised materially higher costs.

The client needed to be able to predict and identify these cases fast, so that targeted interventions could be taken to reduce both the frequency and severity of these claims. The client approached FTI Consulting to capitalise on our **Data Analytics services**.

We extracted key claims journey and behaviour data (both structured and unstructured data), carried out advanced mathematical analysis and built a predictive model. The client engaged our **Services Centre** to build a near real time integration between our solution (on the **FTI Consulting Private Cloud**) and the client's claims system to push visual icons and star-ratings to the end users as a means of simplifying the predictive scores. We also worked with the client to define preventative claims handling strategies and educated their users on how to ultimately realise the cost saving.

The business outcome was a £5m saving in indemnity spend (falling straight to the bottom line). In the first 24 months, on a book value of £105m the client experienced a 15% reduction in the frequency of bodily injury claims and a 20% reduction in severity. This represents a 12 to 1 return on the client's investment from working with us.

Why FTI Consulting?

As an award-winning global consultancy firm, clients benefit from our multi-disciplinary expertise, commercial approach, depth of experience and cultural awareness. We offer:

Highest ISO Security Accreditation

Our entire team works in accordance with our ISO-37001 Security Certification which ensures a highly secure environment for our client's information.

Innovative Technologies

Our Data Architects and Engineers pride themselves on staying current with the latest industry trends and deploying the most performant options for our clients.

Industry Insight

Our team has a proven track record of working across a range of industry sectors at a global level which provides our clients with a competitive edge.

Readily Accessible Senior Experts

We ensure that you have the right people working with you to deliver the insight and assistance you need. Our experts have a long proven track record of delivery, accreditations and awards.

Business Expertise to Complement Data Services

We compliment our data services with both operational insight and commercial strategies to ensure that all investment in data is aligned with target business outcomes.

Technology Alliances

We hold a set of strategically chosen alliances with leading of technology providers, which we use to provide our clients with preferential licencing costs, access to additional advisory services and best practice implementation designs.

Bios

MARK HIGGINS
Senior Managing Director

mark.higgins@fticonsulting.com

Mark Higgins leads our Digital Delivery practice and specialises in data driven performance improvement and business transformation.

Mark has a proven track record working with corporate and private equity clients to assess drivers of non-performance and deliver business solutions that add sustainable commercial value. This includes delivering 10X returns for his clients on their investments in data and digitally driven initiatives.

He has led strategic growth and profitability improvement engagements for blue chip organisations in insurance, banking, wealth management, telecommunications, technology and retail.

JOHNNY ENRIGHT
Managing Director

johnny.enright@fticonsulting.com

Johnny Enright heads up the Data Services component our Digital Delivery practice and has extensive expertise in delivering data strategies, data analytics solutions, business intelligence and change programmes.

Johnny is an experienced Programme Manager primarily in the insurance sector.
