

# FTI Consulting Technology

## South Africa

FTI Consulting delivers proven expertise in computer forensics to help you collect, process and analyse essential data to uncover the necessary insights to present the strongest possible case, including the application of computer-assisted review using industry-leading solutions.

We've earned our reputation by helping clients navigate and solve their data-related business challenges. As data grows in size and complexity, we help organisations better govern, secure, find, analyse and rapidly make sense of information. Innovative technology, expert services and tenacious problem-solving provide our global clients with defensible and repeatable solutions. Organisations rely on us to root out fraud, maintain regulatory compliance, reduce legal and IT costs, protect sensitive materials, quickly find facts and harness organisational data to create business value.

Advanced analytics, expert services and tenacious problem-solving to deliver results for corporations, law firms and government agencies.

### Data & Analytics

Our Data & Analytics team delivers strategic business solutions to clients requiring in-depth analysis of large, disparate sets of financial, operational and transactional data. The complexity of financial systems and globalisation of business processes challenge organisations to preserve and analyse transactional data to identify relevant transactions specific to a litigation and to prevent and detect fraud. Our professionals - respected experts in technology, finance, forensic accounting and the law - map relationships among various systems and geographies, search for specific transactions, and uncover patterns that may signal fraudulent activity.

### E-Discovery & Investigations

Our E-Discovery, Forensic & Collections experts have a keen understanding of the risks and roadblocks associated with complex legal proceedings. We understand the intricacies and implications of company data under legal scrutiny, and the international protection and privacy issues that apply to electronic documents in these contexts. Our technical experts work closely with our forensic accountants and financial investigation professionals to efficiently recover, organise and analyse electronically stored information, regardless of the format or language of that data. FTI delivers proven expertise in computer forensics to help you collect, process and analyse essential data to uncover the necessary insights to present the strongest possible case, including the application of computer-assisted review using our court-proven proprietary Ringtail® E-Discovery platform.

Our Cyber Security Incident Response experts understand that cyber incident response capability must seamlessly integrate across existing mission critical functions, and they have the expertise to respond to all types of threats. We deploy a custom application of the fundamental incident preparedness and response components. This personalised approach maximises the efficiency and effectiveness of the incident response. We focus on each individual phase of the incident response lifecycle to deliver custom-tailored plans to meet your needs.

*“FTI Consultancy aids to better govern, secure, find, analyse and rapidly understand data.”*
